

# WHMCS Everest Cast Pro Provisioning Module

---

The WHMCS **Everest Cast Pro** module is developed in PHP that integrates Everest Cast Pro as a Product/Service into WHMCS.

This allows the ability to create users in Everest cast, change their profile (port, website, station, password ), change their password, suspend/un-suspend or terminate accounts etc.

**Pre-requirements:** Existing installation of WHMCS (version 5.0 and above)

## Step 1:

---

Download **everestcast-whmcs.zip** from the link:

<https://everestcast.com/whmcs-modules/everestcast-whmcs.zip>

Extract and Upload everestcast directory to ../modules/servers/ via FTP or directly upload everestcast-whmcs.zip and extract on ../modules/servers/

## Step 2:

---

### Now Add New Servers

#### How to Add Servers?

~ Login your WHMCS Admin Panel and click on menu Setup > Products/Services > Servers.

~ Click on "Add New Server" Choose Module Name "Everest Cast" Insert your Everest Cast Control panel Installed server Hostname or IP Address, Insert Everest Cast Pro Admin username & Password and Click on Test Connection.

If connection success you reached to the next page if not then allow your Everest Cast Pro Installed server IP in your WHMCS Installed Hosting Server Firewall. If you are taking hosting from other provider then ask them to whitelist your Everest Cast Pro Installed server IP.

And Finally Click on "Save Changes"

## Step 3:

---

Now Create New Server Group and Give Group name and select recently added server from server list and click on ADD and finally click on Save Changes.

**We can create Broadcaster Account two ways:**

## **1. Creating Broadcaster Account using Everest Cast Pro Templates**

Add New Product/Services

### **How to Add New Product/Services?**

Login your WHMCS Admin Panel and click on menu Setup > Products/Services > Products/Services.

Now Click on "Create a New Product"

Choose
